1 Interpretation Centre of Cala Lledó

Es Lledó gives its name to the dock from where watchmen, lighthouse keepers and navigators berthed, an old necropolis, and also the houses of a small livestock farm, currently used to welcome and inform park visitors.

2 Na Miranda viewpoint

In front of an imposing well, it is a magnificent balcony over the Andratx coast and the southern coast of sa Dragonera itself: "its jagged coves, the characteristic coastal shrubland and the flight of birds such as the Common linnet or Red-billed gull".

3 Es Colomer

A cylindrical tower built as a dovecote, although the "gossiping tongues" say that it was a hiding place for smuggling. From here you can see the reefs of Es Calafats, its European shag and, with luck, a Balearic shearwater.balear.

4 The line of Arago

This is a line of stone that identifies the Paris meridian: "the old zero meridian that Frenchman François de Arago measured from Mallorca". Nowadays it has been replaced by the Greenwich meridian.

5 North cliffs viewpoint

Looking over its wooden railing, you can see the steep cliffs of the northern slope. It is not very difficult to see an Eleonora's falcon or Peregrine falcon.

6 Tramuntana Lighthouse

This construction to guide navigators, located at Cape Tramuntana, was built in 1902 and, in order to be able to transport the supplies of the lighthouse keepers, it gave rise to the path of this route.
